

Josh Lake

Objective

A creative and hardworking web developer who uses technology to solve complex problems.

Experience July 2021 – Present

Software Engineer (Front End) *sympplr*

- Focused on improving legacy code through refactoring and implementing testing.
- Helped train and mentor new hires and participated in the interview process.
- Replaced the Kendo component library in seven microsites saving the company \$25,000 per year in licensing fees.
- Transitioned build process from Jenkins to AWS CodePipeline for multiple microsites. This increased the build speed and allowed the use of newer Node.js versions needed for updated packages.

April 2014 – July 2021

Front End Developer *Callahan*

- Built internal tools in JavaScript including a tool to query a 24hr weather data API for over 4500 locations and export as a CSV and a tool to scrape contractor location data from a clients website.
- Created scripts to query APIs and update CRM data in real-time based on landing page form fills.
- Planned and built WordPress sites with custom templates and custom plugins, based on provided design files. rojects ranged from brochure sites to complex e-commerce solutions.
- Updated and maintained Sitecore, Crownpeak, Squarespace, Shopify and ExpressionEngine sites.
- Built landing pages and email campaigns in Marketo, Pardot, HubSpot and Mailchimp.
- Implemented CRM solutions in Act-on, SharpSpring and Jumblead.
- Increased Callahan Lighthouse score from 68 to 100 through optimizations, including caching and redesign.

October 2012 – April 2014

Web Developer *National Seminars Training*

- Refactored main menu from table-based layout to semantic HTML5. Utilized CSS instead of JavaScript for dropdown functionality to increase responsiveness.
- Removed programming logic from the view templates to increase maintainability of the codebase and allow easier future redesign.
- Member of a team with a one-week development cycle that resulted in weekly patch deployments focusing on bug fixes, hot fix deployments and unscheduled high priority business requirements.
- Technology stack included: ColdFusion with Coldbox MVC framework, JavaScript (jQuery and Backbone with various plugins and libraries), MS SQL Server 2008, IIS, SVN version control and MXUnit test framework, with Agile (Kanban/Scrum hybrid) development methodology.

Education

Java Web Dev Cert

2011-2013

Johnson County Community College

BFA, Graphic Design

1997-2002

University of Kansas

Skills

- HTML5/CSS
- JavaScript
- React.js
- WordPress Development
- CRM Implementation

Interests

I like watching comedy specials. I'm also a sucker for seasonal Mountain Dew flavors.
